

If the site administrator has selected the Wysiwig editor as the default at ([Wysiwig Editor Admin](#)), the edit page will look like this:

Edit: New page
Perhaps you are looking for:
HomePage

Use normal editor

Categorize show categories

Apply template: none

Description:

Style Font Size

Source

If not enabled by default, the edit page would show a tab saying "**Use wysiwyg editor**", which would shift the editor from the classical (below) to the visual one (see previous image).

Edit: New page

Quicktags

...

Shifting from visual editor to viewing html source code

Once using the wysiwyg editor, you can shift from the visual editor to the html source code, for instance, using the corresponding "**source**" button.

Edit: New page

Perhaps you are looking for:
HomePage

Use normal editor

Categorize show categories

Apply template: none ▾

Description:

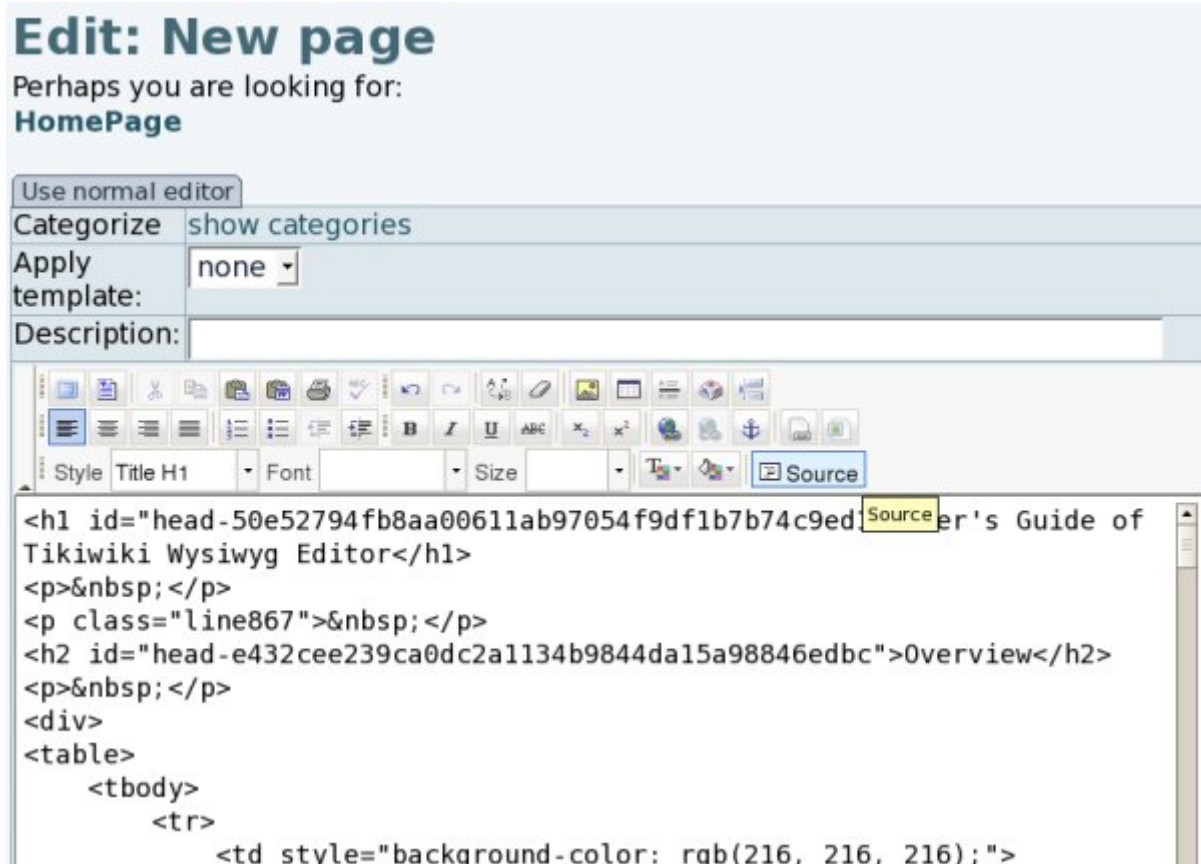

Rich text editor toolbar with icons for undo, redo, bold, italic, underline, link, unlink, list, indent, outdent, and others. Below the icons are dropdown menus for Style (Title H1), Font, and Size, followed by a Source button.

User's Guide of Tikiwiki Wysiwyg Editor

Overview

Icon	What it Does
 Source	View or edit document source code (for advanced users).
	Preview what the HTML page will look like for users.
	Select a layout template. See "Templates" for details.
	Remove the highlighted text... <i>(You must select the text first)</i>

And after pressing at the "source button", the other content (html code) would be shown:

Tiki6: source shown only if the permission is granted

The wiki page edit toolbar in Wysiwyg mode since Tiki6 is now checking if the user has the permission to use HTML (tiki_p_use_HTML), in order to show the "source" button. Similarly, the permission tiki_p_wiki_view_source will be required to allow converting that html into wiki syntax.

Pasting from word processor documents

There is a special feature (and button) to paste content from a word processor program (), which opens a pop up box with a visual text area. Use this to paste the content from your favourite editing program (such as OpenOffice.org Writer, KWord, ... or whatever other closed source alternatives):

Inserting or editing internal Wiki links

Pressing on the button "Inserting or editing internal Wiki links" (), will open pop up window that will allow you to create links to current wiki pages in the Tiki site.

The dialog box is titled "Tiki Link - Insert internal link". It contains a search bar with the text "Find" and a "find" button. Below the search bar is a list of results, currently showing "HomePage". There are also fields for "Link" and "Page name". At the bottom are "OK" and "Cancel" buttons.

Inserting Tiki images

Pressing on the button "Tiki image" (), will open a pop up window that will allow you to insert images into the page.

The dialog box is titled "undefined". It has tabs for "Image Info", "Link", "Upload", and "Advanced". The "Image Info" tab is selected. It contains fields for "URL" (with a "Browse Server" button), "Alternative Text", "Width", "Height", "Border", "HSpace", "VSpace", and "Align". There is a "Preview" section showing a sample text block. At the bottom are "OK" and "Cancel" buttons.

If you click in the "**Browse server**" button, you'll be able to select images from the tiki site to be inserted in that wiki page.
