User, Group, IP selectors are tracker field types used in the trackers feature to attribute items to specific users. Adding a name to a tracker item is necessary but not sufficient to create special viewing and editing privileges - often used with User Tracker, registration tracker or Group tracker.

The page Adding fields to a Tracker explains how the fields, (columns or questions) of a tracker are set up.

**IP Selector**

The automatic feeding option of the field type works exactly like the User Selector except that instead of the user name, it uses the IP of the user.

<table>
<thead>
<tr>
<th>IP Selector</th>
<th>associates the item field to an IP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>automatic feeding</td>
<td>default</td>
</tr>
<tr>
<td>1</td>
<td>assign item to its creator IP</td>
</tr>
<tr>
<td>2</td>
<td>assign item to &quot;last modified by&quot; - the field is filled up by the item creator or editor IP.</td>
</tr>
</tbody>
</table>
