 Integrator Details

Requirements

1. In php.ini $track_errors$ should be $On$ to be able to show integration error messages in a convenient way (;++$php_errormsg++$ PHP variable used).

   ;Store the last error/warning message in $php_errormsg$ (boolean).
   track_errors = On

2. $tiki_p_view_integrator$ (see general permissions) needed to view configured repositories

3. $tiki_p_admin_integrator$ (see general permissions) needed to configure repositories and rules
