If you want a module to be displayed only for some language, you have to set the parameter \texttt{lang} in the \texttt{admin/modules/the\_module} panel. The syntax is

- \texttt{lang=fr}
- \texttt{lang[]=en\textregistered[]=fr}
- \texttt{lang=fr&max=20}

The module will be displayed only if the current language is in \texttt{lang}

This is not the same as \textit{Module Translation}
