Plugin Approval

Starting in Tiki 3, the usage of potentially dangerous plugins needs to be validated in a case by case basis. An admin can do that through tiki-plugins.php.

Example from 8.x

This example shows the "Approve all pending plugins" button. Note the Refresh button that should be used after a Tiki upgrade; that process can take a very long time to reparse all of the pages of your Tiki site; you may have to perform that Refresh more than one time to fully reparse your site.
