Example

**Aname Plugin Usage**

```
{ANAME()}
```

*anchornamere* <-- put the name of the anchor here. Use this same name for the aname= parameter in the Plugin Alink (see just below).

```
{ANAME}
```

ANAME example: `{ANAME()}anchornamename{ANAME}`

**Alink Plugin Usage**

```
{ALINK(

aname=anchornamename <-- put here the name of the anchor you created using the Plugin Aname!

})
```

*link text* <-- put here the text to appear as the link.

```
{ALINK}
```

A LINK example: `{ALINK(aname=anchornamename)link text{ALINK}`
Demonstration

To jump down to the anchor at the bottom of the page click HERE. <-- Here is where I put the ALINK plugin in this page.

Here is a second link to the same anchor at the bottom of the page. Again, I used the ALINK plugin.
The anchor is here. <-- I put the ANAME plugin at the beginning of this line. Now you can click HERE to jump to the anchor I put at the top of the page (you can't see where that one is unless you look into the page editor 😊)
