Plugin Code

This wiki plugin is used to display any source code (including wiki syntax) on a page without it being processed. The code is displayed in a gray box in a fixed-width monospaced font. A title can be added to the box and line numbers added. Syntax highlighting is also available, since Tiki7 using CodeMirror and using GeSHi before that.

Parameters

*Introduced in Tiki 1.*

*Preferences required: wikiplugin_code*

<table>
<thead>
<tr>
<th>Parameters</th>

<td>text</td>
<td>Any supported language listed at <a href="http://codemirror.net/mode/">http://codemirror.net/mode/</a></td>
<td>17</td>
<td>17</td>
</tr>
<tr>
<td>wrap</td>
<td>(blank)</td>
<td>Wrap lines of code which do not fit in the display box's width. Enabling avoids overflow or hidden line ends.</td>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>theme</td>
<td>default</td>
<td>3024-day</td>
<td>3024-night</td>
<td>ambience</td>
</tr>
</tbody>
</table>
### Syntax highlighting

To activate syntax highlighting and enjoy most of the options (lines number, colors, etc), the Code editor (CodeMirror) feature must be enabled at Control Panels > Editing and Plugins > General Settings (tab) > Features (pane).

See the list of CodeMirror supported languages that can be used for the `colors` parameter.

#### Example

**PHP with line numbers**

*This code:*

```php
{CODE(colors="php")}
<?php
$menubar = $menubar->getHomeMenu();
if($menubar->link != "") {
    print "\t<td width="7%" valign="top">\n";
    $menubar->printMenu();
    print "\t</td>\n";
}
{CODE}
```

*Would produce:*

```php
<?php
$menubar = $menubar->getHomeMenu();
if($menubar->link != "") {
    print "\t<td width="7%" valign="top">\n";
    $menubar->printMenu();
    print "\t</td>\n";
}
```

**Tiki syntax highlighting**

Tiki syntax is supported too.

*This code:*

```
{CODE(colors="tiki")}
```
Legacy GeSHi Documentation (deprecated in Tiki8)
