Shopping cart

Since Tiki5 there has been a basic shopping cart feature in Tiki and, since Tiki7.1, there are a number of advanced features that can be further configured.

Products or services can be maintained in wiki pages or with the Pretty Tracker method and added to Module Cart through the PluginAddToCart, and information sent to payment.

The profile Shopping Cart can be used to get started easily.

Manage Product Inventory

Allows inventory to be set and tracked for products in a tracker. The feature also puts products on hold when they are added to a user's cart and are returned subsequently if not bought.

Bundled Products

Allows one product to "contain" multiple other products. The price of the bundle itself is the price that the user pays. The child products' prices are ignored when a bundle is bought.

Record Orders in Trackers

Allows orders and order items to be saved in trackers and therefore can be reviewed or used in conjunction with Pretty Trackers to show users what they have bought, etc...

The recording also allocates and keeps track of value inputted to child products of bundles (not the actual price paid since the user pays the price of the bundle, not the child products).

You will need two trackers, one to store Orders and Order Items, and two special profiles to be placed on wiki pages.
Profiles needed to record orders

These profiles are to be placed on wiki pages on the system where the cart is. The tracker and field IDs in the profiles are to be updated so that orders and order items information can be recorded in the right fields.

OrderProfile and OrderItemProfile

Trackers Needed

Note that for now, the code expect certain specific Field Names. See Shopping Cart Trackers for more information

Anonymous shopping

Page Aliases

- Auction or Auctions "An auction is a process of buying and selling goods or services by offering them up for bid, taking bids, and then selling the item to the highest bidder." Source: http://en.wikipedia.org/wiki/Auction
- Cart or Carts
- Shopping Carts
- Commerce, E-Commerce, or ECommerce
- Market or Marketplace: This feature should be like a Shopping Cart but where anyone can put items for sale. Think --classified ads, car pool, etc. Please also see http://en.wikipedia.org/wiki/Rental_management_software
- market multi-sellers or a mall platform for sellers within the community
