Tiki22

Tiki 22.0 will be released in October 2020 (and development will start in February 2020)

It is a Standard Term Support (STS) version and will be supported until Tiki 23.1 is released as per the Tiki lifecycle policy

As a post-LTS version, this one typically has more changes than usual. However, as of 2019-11-26, there are no major changes like the move from Bootstrap 3 to Bootstrap 4.

See what is planned: Tiki22

Table of contents

- 1.1. Catch-all notification email
- 1.2. Check
- 1.3. Mail-in to files
- 1.4. Mail Notifications
- 1.5. Numeric field data modification via scroll
- 1.6. Trackers
  - 1.6.1. Duration field type
  - 1.6.2. Search orphaned field names
  - 1.6.3. Exclude indexing non-searchable tracker fields
  - 1.6.4. Shorten tracker field names in mysql search index to allow greater number of fields in the index
  - 1.6.5. Group can see their own items
- 1.7. Wiki Plugins
  - 1.7.1. PluginListExecute
  - 1.7.2. PluginList editable filters
  - 1.7.3. PluginPivotTable
  - 1.7.4. PluginTOTP
  - 1.7.5. Unified Index
  - 1.7.6. Webmail contacts

(alphabetically sorted)

1.1. Catch-all notification email

http://sourceforge.net/p/tikiwiki/code/75843

1.2. Check

- tiki-check database tables/columns mismatches

1.3. Mail-in to files

Mail-In to Files - save email as message/rfc822 file in a file gallery - include raw content and all headers

http://sourceforge.net/p/tikiwiki/code/75496
1.4. Mail Notifications
add catch-all/redirect mail delivery option for SMTP messages - useful when debugging or testing upgrades to have all Tiki mail delivered to a single mailbox
https://sourceforge.net/p/tikiwiki/code/75930

1.5. Numeric field data modification via scroll
Browsers have different behaviors which causes support issues. Harmonizing behavior by default while permitting previous behavior: https://sourceforge.net/p/tikiwiki/code/75930

1.6. Trackers
1.6.1. Duration field type
- New Duration Tracker field

1.6.2. Search orphaned field names
tiki-admin_orphaned.php
https://sourceforge.net/p/tikiwiki/code/76278/

1.6.3. Exclude indexing non-searchable tracker fields
https://sourceforge.net/p/tikiwiki/code/76278/

1.6.4. Shorten tracker field names in mysql search index to allow greater number of fields in the index
https://sourceforge.net/p/tikiwiki/code/76303/

1.6.5. Group can see their own items
add options for 'Group can see their own items' and group ownership to GroupSelector fields - enhance permission system to support ability for users in specific group to view items associated with that group
https://sourceforge.net/p/tikiwiki/code/76003/

1.7. Wiki Plugins
New, improved or Fixes

1.7.1. PluginListExecute
PluginListExecute
Improved. New action tracker_item_clone has been added.
This gives the ability to clone one or more selected tracker items and execute more actions on the clones after that - e.g. tracker_item_modify
https://gitlab.com/tikiwiki/tiki/-/commit/ea6f50574b0dc8e19fc5a5dd979686a0c10d872f

Fix. Allow checkbox value to be reset with tracker_item_modify ListExecute action.
Fix. cloning tracker items via ListExecute keeps auto-assigned UserSelector values instead of resetting that to none or current user

1.7.2. PluginList editable filters
Improved. See: PluginList with editable filters

1.7.3. PluginPivotTable
Column/Row sort order are now savable

1.7.4. PluginTOTP
- PluginTOTP

1.7.5. Unified Index
Now supports emails which are stored as files

Commit: 75563 - added a preference in search index and file gallery which is off by default - Automatic indexing of emails stored as files
- when you turn it on, rfc822 files (aka eml files) will be parsed and stored as separate fields in the search index. For now, these fields are stored:
  
  - email_subject
  - email_from
  - email_sender
  - email_recipient
  - email_date
  - email_content_type
  - email_body
  - email_plaintext
  - email_html

1.7.6. Webmail contacts
- add read-write access to webmail contacts via CardDAV and refactor underlying backend
