Tiki 22.0 will be released in October 2020 (and development will start in February 2020)

It is a Standard Term Support (STS) version and will be supported until Tiki 23.1 is released as per the Tiki lifecycle policy

As a post-LTS version, this one typically has more changes than usual. However, as of 2019-11-26, there are no major changes like the move from Bootstrap 3 to Bootstrap 4.

See what is planned: Tiki22

Table of contents

- 1.1. Catch-all notification email
- 1.2. Check
- 1.3. Mail-in to files
- 1.4. Numeric field data modification via scroll
- 1.5. Wiki Plugins
  - 1.5.1. PluginListExecute
  - 1.5.2. PluginList editable filters
  - 1.5.3. Unified Index

(alphabetically sorted)

1.1. Catch-all notification email

http://sourceforge.net/p/tikiwiki/code/75843

1.2. Check

- tiki-check database tables/columns mismatches

1.3. Mail-in to files

Mail-In to Files - save email as message/rfc822 file in a file gallery - include raw content and all headers
http://sourceforge.net/p/tikiwiki/code/75496

1.4. Numeric field data modification via scroll

Browsers have different behaviors which causes support issues. Harmonizing behavior by default while permitting previous behavior: https://sourceforge.net/p/tikiwiki/code/75930

1.5. Wiki Plugins

New or improved.

1.5.1. PluginListExecute

Improved. New action tracker_item_clone has been added.
1.5.2. PluginList editable filters

Improved. See: PluginList with editable filters

1.5.3. Unified Index

Now supports emails which are stored as files

Commit: 75563 - added a preference in search index and file gallery which is off by default - Automatic indexing of emails stored as files - when you turn it on, rfc822 files (aka eml files) will be parsed and stored as separate fields in the search index. For now, these fields are stored:

email_subject
email_from
email_sender
email_recipient
email_date
email_content_type
email_body
email_plaintext
email_html
