

This page should [merge](#) with [Group Alert](#)

Alert is a new feature in 3.0 to send an email to users about a specific change I just made.

It is similar but different than [watch](#)

- Watch: pull, watching all **future changes**
- alert: push an alert about a change that is being made **now**

It is similar but different than [tell a friend](#)

- Tell a friend: Email someone about a specific URL (and possibly a comment)
- alert: Email a number of people about a change that is being made **now**

Alias

- [push](#)
- [A_L_E_R_T](#)
