

Mobile Tiki User

This is a [stub](#). And [needs review](#)

This is how a user will see a MobileTiki enabled site through the computer web browser:

The screenshot shows the desktop version of the mobile.tikiwiki.org website. The page has a black header with the text "Welcome to mobile.tikiwiki.org". Below the header, there are three main columns. The left column contains a "Menu" section with links like Home, Why?, Who?, WishList, News, Forums, Keywords, Links, and TermsOfUse. Below this is a "Mobile" section with a "Portal" and a "MAGNIFIED" button. The bottom left section is "VoiceControl", which provides instructions on how to use the site via a phone. The middle column displays the page content, starting with "page id: 2" and "Objectives for the mobile.tikiwiki.org project". It then asks "Why mobile.tikiwiki.org?" and lists two objectives: 1. To develop from Tiki CMS/Groupware & HAWHAW an easy tool for any webmaster to generate a website accessible to visually challenged (blind) people, cell phones, PDAs, Lynx text browsers and VoiceXML applications. 2. To develop a community around this objective, including of course visually challenged users. It then states, "We will attain this objective by eating our own Dogfood", meaning we will develop this tool by using it as well. This is in an open source & open development project. Please join us and help transform this idea into reality. Please see WishList. Below this, it mentions that Tiki CMS / Groupware is already used to manage an estimated 20,000 to 50,000 websites & intranets. As we improve Tiki's accessibility features, the Web will become a that much friendlier place for surfers with accessibility needs. At the bottom of the middle column are links for "source" and "history". The right column is titled "HAWHAW news" and lists several news items, including "Re: [HawHaw] Two HTTP request for the same page ?", "Re: Image Links", "HAWHAW in the press", "Re: Prophecy voice platform", "Re: Prophecy voice platform", "Re: invalid argument in add_option()", "invalid argument in add_option()", "Re: search IM application in Hawhaw ?", "Re: search IM application in Hawhaw ?", and "parse inside hawhaw". At the bottom right of the page is a "Login" button. The page is powered by Tikiwiki, as indicated by the logo at the bottom left.

This same page, in the mobile version, will look much simpler, using either small fonts:

The screenshot shows the mobile version of the mobile.tikiwiki.org website. The page has a green background. At the top, there is a black header with the text "Why". Below this, there are two links: "[Wiki Home]" and "[Home]". The main content area is titled "Why mobile.tikiwiki.org?" and contains the same two objectives as the desktop version: 1. To develop from Tiki CMS/Groupware & HAWHAW an easy tool for any webmaster to generate a website accessible to visually challenged (blind) people, cell phones, PDAs, Lynx text browsers and VoiceXML applications. 2. To develop a community around this objective, including of course visually challenged users. At the bottom of the page, there is a footer that says "Powered by HAWHAW (C)" and a logo for "Powered by Tikiwiki".

Or a magnifying version with larger fonts for visually handicapped people:

Powered by HAWHAW (C)
