Organic Group Example

This documentation is work in progress.

Definition of organic groups

Organic Groups are Templated Groups that are created and managed by users as opposed to by the site admin.

General approach

The following features are used together to setup Organic Groups.

- Templated Groups to setup and create the groups and group assets, and Roles to manage permissions
- PluginSubscribeGroup or PluginSubscribeGroups for users to join groups by themselves.
- PluginMemberList and PluginGroupEdit for non-site-admin group leaders to be able to manage membership in the group and to edit limited information (name/description) of the group.
