Plugin Annotation (for jpg Images)

Use this wiki plugin, introduced in Tiki2, to annotate screenshots or other images. The part of the image that the annotation refers to is highlighted with a red border and the annotation text is placed under the image. This plugin was revamped for Tiki15 and new options were added.

Screenshot

Here's a screenshot of the plugin in action showing the edit interface that pops up after the annotated section has been clicked (the green border shows the section has been clicked).

Parameters

Annotate an image
Introduced in Tiki 2. Required parameters are in **`bold`**.
Go to the source code
Preferences required: wikiplugin_annotation

Parameters	Accepted Values	Description	Default	Since
