

Plugin HTML

This [wiki plugin](#) allows you to add any HTML (including scripts and objects) to a wiki page. This plugin was introduced in [Tiki3](#).

See also [PluginJS](#) and [PluginJQ](#).

Parameters

Add HTML to a page

Introduced in Tiki 3.

[Go to the source code](#)

Preferences required: `wikiplugin_html`

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		HTML code		
<code>tohead</code>	(blank) 0 1	Insert the code in the HTML head section rather than in the body.	0	17.0
<code>wiki</code>	(blank) 0 1	Parse wiki syntax within the HTML code.	0	3.0

Examples

Basic syntax

```
{HTML()} You can use <b>HTML here</b> including JavaScript, etc. This is unsafe and thus, must be validated by a trusted editor {HTML}
```

Example 1

You could paste the code you get for a [Google Gadget](#), a [PayPal button](#), etc.

For example, using this code:

```
Adding an HTML Iframe into a wiki page.
```

```
{HTML()}<iframe src="//www.slideshare.net/slideshow/embed_code/1106826" width="425" height="355" frameborder="0" marginwidth="0" marginheight="0" scrolling="no" style="border:1px solid #CCC; border-width:1px; margin-bottom:5px; max-width: 100%;" allowfullscreen> </iframe><div style="margin-bottom:5px"> <strong> <a href="//www.slideshare.net/RegisBarondeau/tikifest-montreal-mars-2009-fr" title="TikiFest Montreal Mars 2009 fr." target="_blank">TikiFest Montreal Mars 2009 fr.</a> </strong> from <strong><a href="//www.slideshare.net/RegisBarondeau" target="_blank">Régis Barondeau</a></strong> </div>{HTML}
```

Will produce this presentation embedded in the page:

[**TikiFest Montreal Mars 2009 fr.**](#) from [**Régis Barondeau**](#)

Example 2

Embedding some html object from a site serving embeddable videos (youtube, vimeo, etc):

```
{CENTER()} {HTML()} <object width="480" height="385"><param name="movie" value="http://www.youtube.com/v/U_CDQZLmYts&hl=en_US&fs=1"></param><param name="allowFullScreen" value="true"></param><param name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.com/v/U_CDQZLmYts&hl=en_US&fs=1" type="application/x-shockwave-flash" allowScriptAccess="always" allowfullscreen="true" width="480" height="385"></embed></object> {HTML} {CENTER}
```

However the plugin call was not validated by the admins but denied, and this is what it would produce:

Plugin execution was denied

After argument validation by an editor, the execution of this plugin was denied. This plugin will eventually be removed or corrected.

Example 3

Making a wiki link to look like a button of the same theme style that you are using. For instance, this code:

```
^ {HTML()} <a href="tiki-index.php?page=PluginHTML&itemId#Example_3" class="btn btn-primary">Save changes</a> with my custom button to the page PluginHTML, while you send also itemId in the url for PluginTrackerList magic, for instance (not used in this simple example){HTML} ^
```

Would produce:

Save changes with my custom button to the page PluginHTML, while you send also itemId in the url for PluginTrackerList magic, for instance (not used in this simple example)

Example 4

When the parameter *wiki=1* is used, wiki syntax will be parsed in the content inside HTML plugin.

```
{HTML(wiki=1)} <div class="p-3" style="background: skyblue; box-shadow: 6px 6px 4px;"> This wiki syntax will be parsed to produce special characters: * "Some examples:" ~amp~ ~lt~ ~c~ * _More examples:_ ~gt~ ~ldq~ * ~rdq~ ~lsq~ * ~rsq~ * ~--- -- </div> {HTML}
```

produces:

This wiki syntax will be parsed to produce special characters:

- *Some examples:* ~amp~ ~lt~ ~c~
- **More examples:** ~gt~ ~ldq~
- ~rdq~ ~lsq~
- ~rsq~
- ~---

Alternatives

There are others ways to include HTML in a page:

- Use the **WYSIWYG** editor. Note that Tiki will automatically filter potentially unsafe content.
- Enable the **Allow HTML in Wiki Pages** option. Note that Tiki will automatically filter potentially

unsafe content.

- Use [PluginJS](#) to include JavaScript in a wiki page.
