

Plugin Language

Use the [wiki plugin](#) to vary content based on the page language.

Parameters

Show alternative content based on the page language

Introduced in Tiki 1.

[Go to the source code](#)

Preferences required: feature_multilingual, wikiplugin_lang

Parameters Values	Accepted Values	Description	Default	Since
(body of plugin)		Content to show		
<code>lang</code>		List of languages for which the block is displayed. Languages use the two letter language codes (ex: en, fr, es, ...). Use <code>+</code> to separate multiple languages.	1	
<code>notlang</code>		List of languages for which the block is not displayed. Languages use the two letter language codes (ex: en, fr, es, ...). Use <code>+</code> to separate multiple languages.	1	

Examples

Based on language

```
{LANG(lang="en")}{Hello}{LANG} {LANG(lang="fr")}{Bonjour}{LANG}
```

If the current language is en (English), "Hello" will be displayed. If it is fr (French), "Bonjour".

Based on language and not language

This code:

```
{LANG(lang="fr")}{Bonjour le monde!}{LANG}{LANG(lang="es")}{Hola,  
mundo!}{LANG}{LANG(notlang="fr+es")}{Hello world!}{LANG}
```

Would produce on this site:

Hello world!

With [PluginTranslated](#)

The language can match the `lang` url parameter. So if you couple this plugin with the [PluginTranslated](#), you can have a kind of multilingualism:

```
{LANG(lang="fr")}{en Français}{LANG} {LANG(lang="en")}{in English}{LANG} --- (page break)  
{TRANSLATED(flag="France" lang="fr")}{./tiki-  
index.php?page=MyPage&lang=fr}>>]{TRANSLATED} {TRANSLATED(flag="United_States"}
```

lang="en")}{./tiki-index.php?page=MyPage&lang=en|>>}{TRANSLATED}
