Plugin Markdown

Introduced in Tiki20

Use this wiki plugin to parse a page content using Markdown syntax.
CommonMark flavor of Markdown was used for the implementation. See
https://commonmark.thephpleague.com/

Coming to Tiki25 and much improved in Tiki26: Tiki-Flavored Markdown

Parameters

Parse the body of the plugin using a Markdown parser.
Introduced in Tiki 20.
Go to the source code
Preferences required: wikiplugin_markdown

Parameters
(body of plugin) - Markdown syntax to be parsed *no parameters*

Examples

Example 1

This code:

```
{MARKDOWN()} # This is an h1 tag ## This is an h2 tag ###### This is an h6 tag *This text will be italic* (hard line break after this because of two spaces -->) _This will also be italic_ **This text will be bold** (there's alternative syntax for line break after this parenthesis)\ __This will also be bold__ _You **can** combine them_ {MARKDOWN}
```

Would produce on this site:

This is an h1 tag

This is an h2 tag

This is an h6 tag

This text will be italic (hard line break after this because of two spaces -->)
This will also be italic

This text will be bold (there's alternative syntax for line break after this parenthesis)
This will also be bold

*You **can** combine them*
