Development Roadmap

This has a lot of potential but there's a lot to improve in the presentation and very raw code I just introduced.

From WebHelp:

PS: One to-do is to make the CSS of the webhelp compatible with the default style for the site, in order to do this I think that we must edit the base (.html) files in the lib/tikihelp directory and make them use elements already defined in the style instead of redefining new elements.

Developer Notes

An upgrade of structures was done in 2.0. The documentation the pages linked to this page makes some mention as to what is available.
