

Attachments

In Tiki, files can be attached to [Wiki](#) pages, [Trackers](#), [Forums](#) posts, and so on.

Wiki Attachments

Enable wiki attachments

Wiki attachments must first be enabled at tiki-admin.php?page=wiki&cookietab=2&highlight=feature_wiki_attachments .

For user groups to be able to view and attach files, the permissions *wiki_view_attachments*, and *wiki_attach_files* must be assigned to at least one of the [Groups](#) the user is a member of.

These two permissions allow the viewing and uploading of attachments. By default, deleting an attached file is only possible for the one who uploaded the file or for site administrators. A global ability to delete attachments can be granted to a group if the permission *tiki_p_wiki_admin_attachments* is assigned to the group.

There are two ways to store Wiki attachments files in Tiki:

- Using the database (Old attached file storage system)
- Using file galleries (Wiki attachments will be stored in the file gallery. This is the preferred way to store attachments starting Tiki 26+)

Migration tool for both storage systems

You can switch from one storage system to another while importing files from one system to another using the following console command:

```
php console.php attachments:migrate
```

This migration tool is a two-way tool - can convert legacy attachments to files in galleries and vice-verse

Note that the usual way to migrate is from old attachments to file galleries. To do this, make sure that the `feature_use_fgall_for_wiki_attachments` preference is turned on.

Otherwise when moving files to legacy storage, you will need to manually update the associated wiki pages. Files from file galleries are replaced in wiki attachments and provide a table with mappings at the end with: file ID, file name, attachment ID, so users can override their uses manually

What exactly is migrated

When migrating from the old system (legacy storage) to the file galleries, wiki attachments are migrated to file galleries as db records and file contents are migrated to proper place (depending on how file galleries store files - db or disk). A special file gallery for wiki attachments with ID 3 is used to store these attached files.

Wiki page updates

We will replace plugin file, img, etc. references to attachments with file IDs, so we keep the same plugins but might change their parameters.
