Category Tracker Field

The field type enables you to assign one or more categories to a tracker item.
The categories that are displayed are the children of one category. This parent category must be identified by its category ID.

Once tracker item is categorized, it inherits Category Permissions if applicable as per Permission Enforcement Order

Options

Note

Removing a tracker's category field does not uncategorise the items. This should be done manually before removing the field or using category admin afterwards.

Old pre 7.x notes

[+]
Style

The div that contains the selec all button has a class .categSelectAll

Category Browsing

The main field of the tracker item will be displayed in the categories browsing.
