

# Plugin Icon

Use this [wiki plugin](#), introduced in [Tiki14.1](#), to display an icon. Since Tiki14, the admin for a site can choose the iconset to use for a site at **Control Panels > Look & Feel**. This plugin will show icons from the icon set specified in that setting. The icons shown below are from Tiki's default icon set, Fontawesome.

## Parameters

Notes:

- Styles accepted values are : "solid", "outline", "light" (Font Awesome Pro Only) and "brands"
- default = size="1"
- Choices are 1 to 9
  - If you choose size 10 it goes to default.

Since Tiki19 and after [Font Awesome](#) was upgraded to version 5, a new parameter "style" has been added to display, for example, different version of the same icon. Icon can be solid (plain), regular (outlined)

## Other Parameters

Parameters supported by `smarty_function_icon` are also supported by the Icon plugin, these (as of Tiki 20) are:

- - Standard html element attributes can be used here, such as: href, title, data-toggle and onclick

- - `class`: set custom class (otherwise default classes are applied). When using icon sets, this class will apply to anchor element
- - `iclass`: set custom class for the icon itself (not the link)
- - `ititle`: set custom title for the icon itself (not the link)
- - `istyle`: set custom style for the icon itself (not the link)
- - `_type`: type of URL to use (e.g. `'absolute_uri'`, `'absolute_path'`). Defaults to a relative URL.
- - `_tag`: type of HTML tag to use (e.g. `'img'`, `'input_image'`). Defaults to `'img'` tag.
- - `_notag`: if set to `'y'`, will only return the URL (which also handles theme icons).
- - `_menu_text`: if set to `'y'`, will use the `'title'` argument as text after the icon and place the whole content between div tags with a `'icon_menu'` class (not compatible with `'_notag'` param set to `'y'`).
- - `_menu_icon`: if set to `'n'`, will not show icon image when `_menu_text` is `'y'`.
- - `_confirm`: text to use in a popup requesting the user to confirm its action (yet only available with javascript)
- - `_defaultdir`: directory to use when the `_id` param does not include the path
- - `_extension`: Filename extension - default `'png'`
