

mPDF

Overview

mPDF is a PHP class which generates PDF files from UTF-8 encoded HTML. It is based on FPDF and HTML2FPDF, with a number of enhancements. **mPDF** was written by Ian Back and is released under the GNU GPL v2 licence.

mPDF is manually installable in Tiki since Tiki 15.2. Since [Tiki18](#) you can install **mPDF** with the new **Packages** feature from the Tiki admin panel in a few clicks.

 - [Overview](#)
 - [Installation](#)
 - [Configuration](#)

Installation

1. Enable **mPDF** in Tiki: login to your Tiki and go to example.org/tiki-admin.php?page=print and set the following preference: PDF from URL: mPDF
2. If mPDF is not installed, you can install mPDF via the [Composer Web Installer](#)

Configuration

mPDF works well with Tiki out-of-the-box even on average shared hosting. There are many options at tiki-admin.php?page=print, most of which can be overridden page by page via [PluginPDF](#)

If you are programmer, you may want to look in */mpdf/config.php for additional configuration options.
