

unoconv

Universal Office Converter - Convert between any document format supported by LibreOffice/OpenOffice. <http://dag.wiee.rs/home-made/unoconv/>

<https://github.com/unoconv/unoconv>

Support was added to [Tiki19](#), and improved in [Tiki20](#). This permits pretty much all file formats to be converted to PDF, and then viewed via [PDF.js viewer](#).

How to activate

In tiki-admin.php, activate the preference **View or export office documents as PDF** (fgal_convert_documents_pdf)

It requires dependencies to be installed. The admin panel will indicate if you are missing anything.
