

Tiki Shadow Layers are a way of modifying the look of your Tiki 50 theme, without directly modifying the HTML/TPL or CSS files. Instead, you can enter HTML and some inline CSS through the "Shadow Layer" tab on the Tiki's "Look & Feel" administration tab. Intermediate to advanced users can go even further, and use smarty template tags along with HTML and CSS to focus the look for certain features and not others (for example change the look and feel of wiki pages, but not the calendar or articles).

To begin modifying the shadow layers, go to "tiki-admin.php" (e.g. <http://www.somedomain.com/tiki-admin.php>). Click on the "Look and Feel" button on the administration panel.

Look & Feel

The shadow layer input text boxes will now appear. There are six pairs of input boxes. These boxes modify the content of the same-named "<div>" tags that comprise the tiki-index.tpl file.

Here is a shortened version of the home wiki page, so that all the shadow layer inputs show up. This test is just to demonstrate where the inputs show up.

The screenshot shows a web browser window displaying the Tiki Wiki homepage. The browser's address bar shows the URL `http://www.nactaf.com/tiki50`. The page content includes a navigation menu on the left, a main heading "HomePage", a "Thank you for installing Tiki." message, and two columns of "Get Started" guides. Red circles and lines highlight specific text annotations overlaid on the page, indicating the start and end of various shadow layers. A red-bordered box at the top right contains a descriptive text block.

Annotations on the page:

- Main shadow start:
- Header shadow start:

When you click the "Display" button, you will be able to see the CSS settings and select some appropriate colors to match the current theme. The style sheet is very long, and you will need to scroll down to locate the various colors.

Edit Style Sheet

Style Sheet:

```
$Id: fivealive.css 27500 2010-06-05 06:41:12Z chibaguy $
FiveAlive theme (fivealive.css) for TikiWiki CMS/Groupware.
Visit http://themes.tikiwiki.org for more information.

Import foundation CSS files.

@import url("lite.lite.css");
@import url("layout.layout.css");
@import url("layout.design.css");

**** XHTML Elements (body tag here,
others follow Layout) ****

body
font..... : 76%/1.5em Arial, Helvetica, sans-serif
color..... : #000

body.filegal_popup
background-image..... : none
padding..... : 0 2em

*first-child+html body
font-size..... : 74% !important

**** Layout ****

#fixedwidth
body.fixed_width #fixedwidth
width..... : 100%

#header
background..... : url(fivealive/options/blueberry/headertile.png) 900px 0 no-repeat

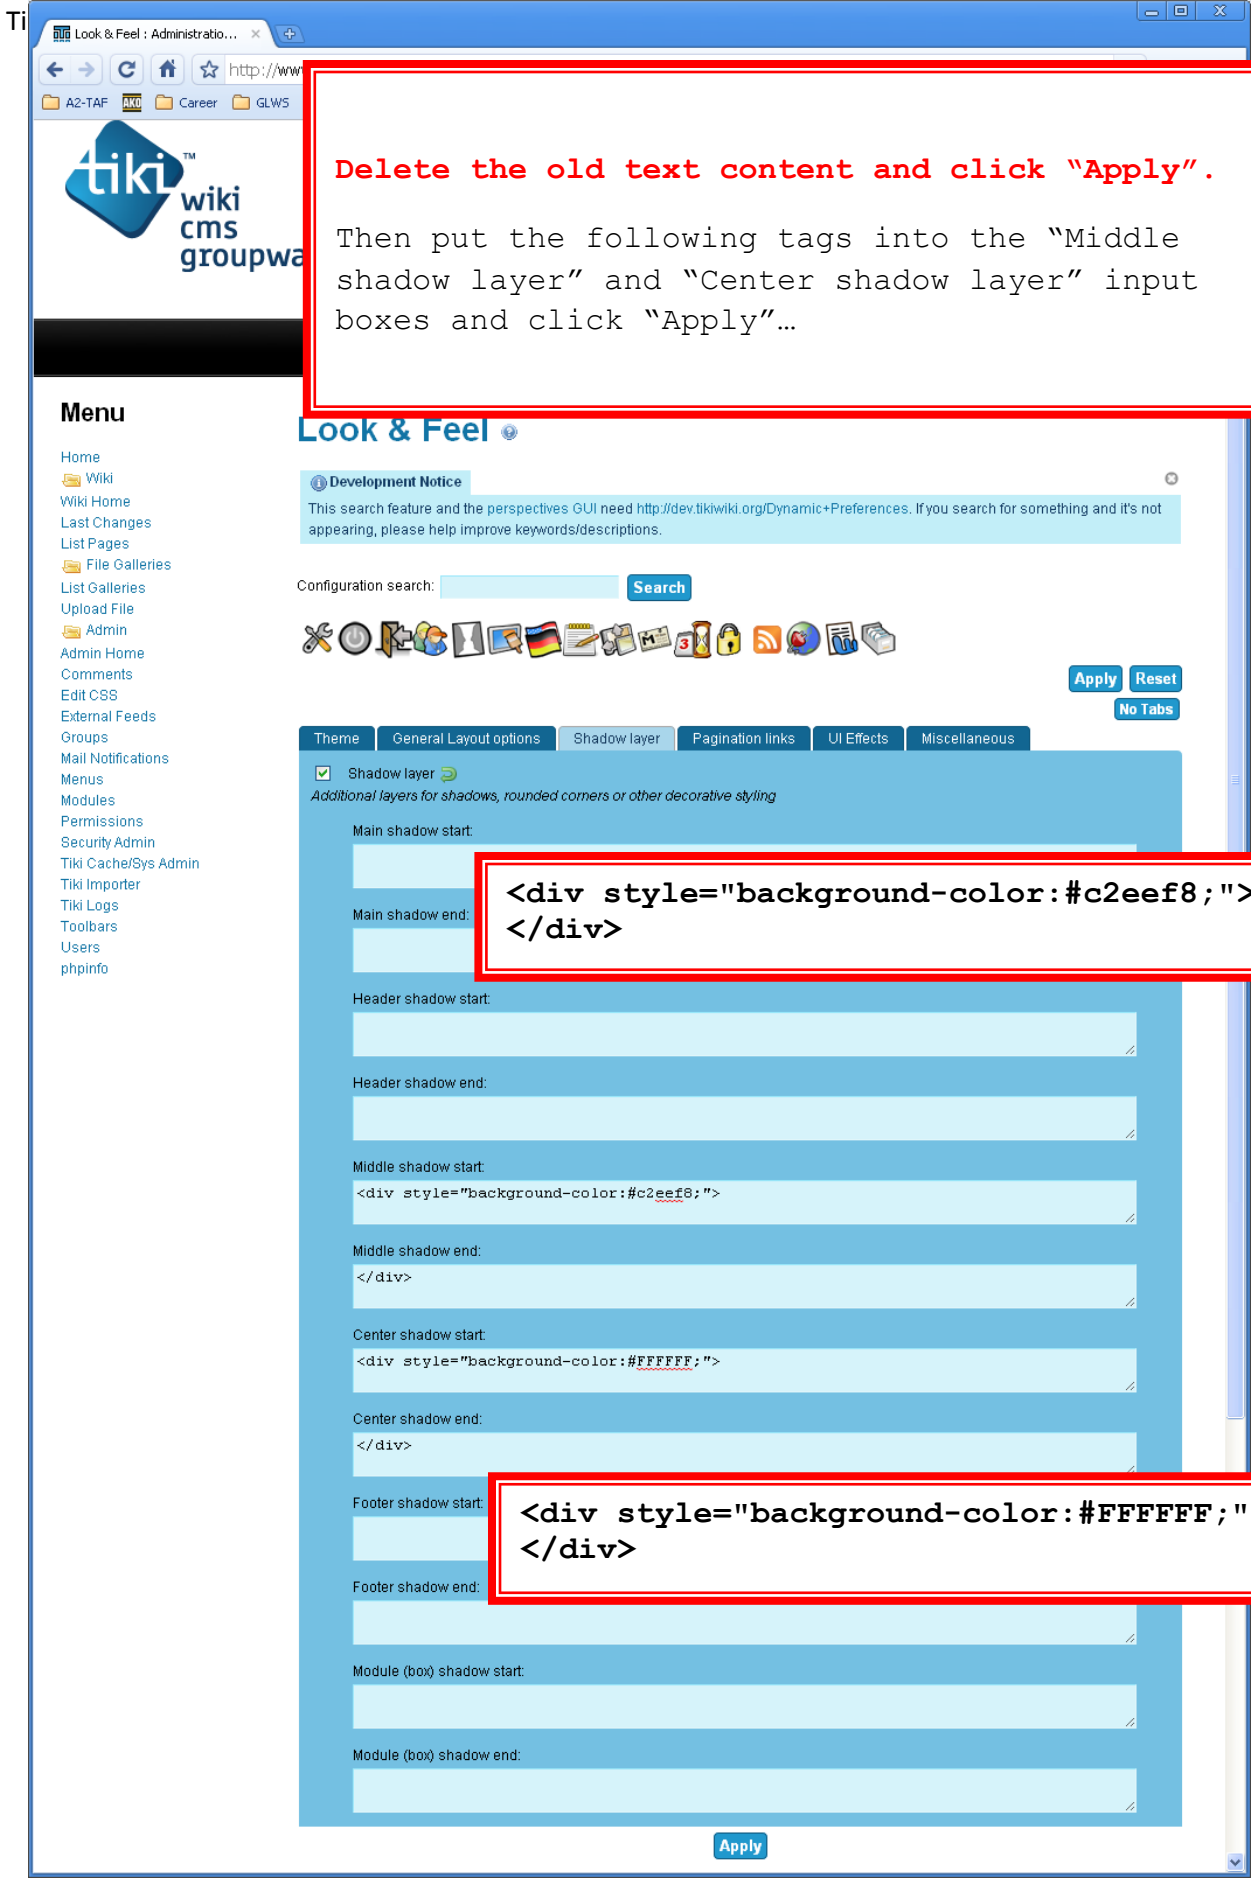

#header-top,
#tiki-top.wrapper
#middle
display..... : table
margin..... : auto
margin-top..... : 0
margin-bottom..... : 0
width..... : 990px
background..... : transparent

#header-top
```

Here I have selected three colors of blue that appear as part of the new "Fivealive" (none) theme...

```
border..... : #2098cd  
background..... : #c2eef8  
color..... : #143c64
```

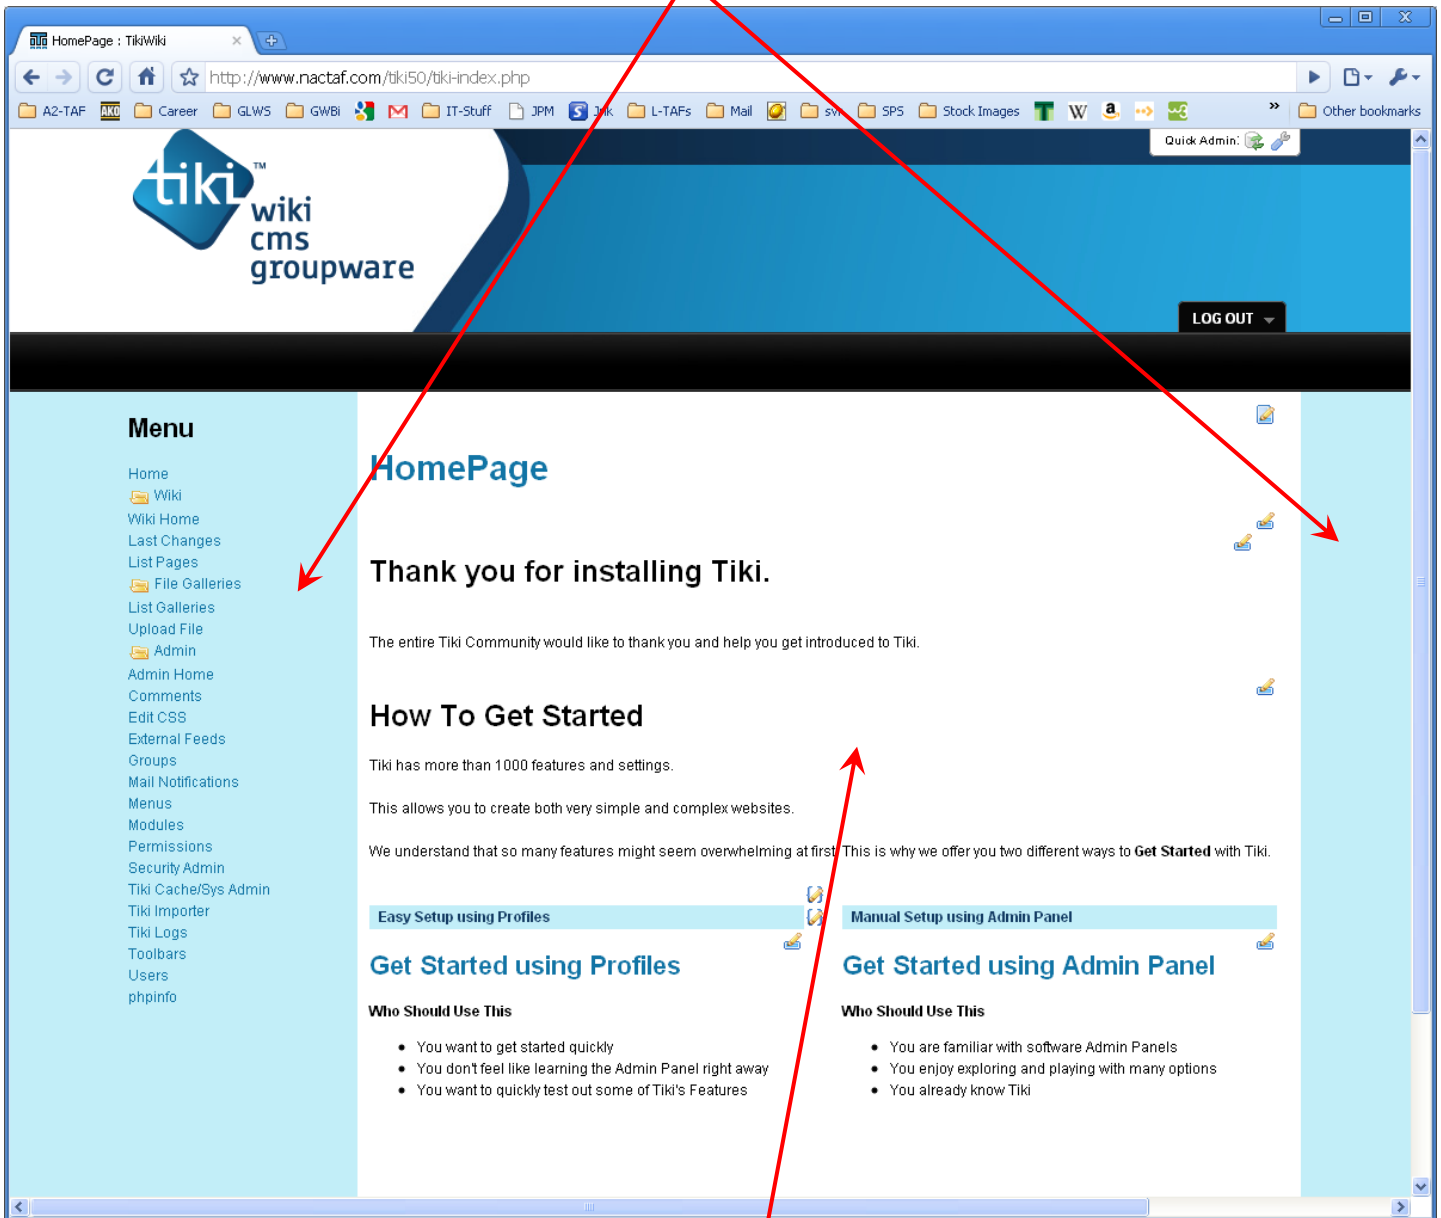

Delete the old text content and click "Apply".

Then put the following tags into the "Middle shadow layer" and "Center shadow layer" input boxes and click "Apply"...

```
<div style="background-color:#c2eef8;">
</div>
```

```
<div style="background-color:#FFFFFF;">
</div>
```

The "Middle" is light blue

The "Center" is white
