Full WYSIWYG editor	WYSIWYG is an acronym for "What You See Is What You Get". CKEditor is used to provide a word-processor-like editing experience. 🖋	Enabled
Ajax auto-save	Save content during editing, enabling work to be recovered after any interruption. Also enable a real-time preview. This option is required for WYSIWYG plugin processing.	Enabled
Preview Edits	Add a preview tab to text areas.	Enabled
Smileys	Also known as emoticons	Enabled
Wiki paragraph formatting	When the wiki paragraph formatting feature is on, all groups of non-blank lines are collected into paragraphs. Lines can be of any length, and will be wrapped together with the next line. Paragraphs are separated by blank lines. When the Wiki paragraph formatting feature is off, each line will be presented as you write it. This means that if you want paragraphs to be wrapped properly, a paragraph should be all together on one line.	Enabled
Create line breaks within paragraphs	When Wiki paragraph formatting is enabled, this option creates line breaks within paragraphs.	Enabled

Option	Description	Default

HTML purifier	HTML Purifier is a standards-compliant HTML filter library written in PHP and integrated in Tiki. HTML Purifier will not only remove all malicious code (better known as XSS) with a thoroughly audited, secure yet permissive whitelist, it will also ensure that your documents are standards-compliant. Keep in mind that HTML Purifier is not HTML5 compatible and may rewrite HTML5 syntax and produce unwanted results. 🔑 <i>If you use HTML in your wiki page and it gets stripped out or rewritten, make sure your HTML is valid, or de-activate this feature. Keep in mind that HTML Purifier is not HTML5 compatible and may rewrite HTML5 syntax and produce unwanted results.</i>	Enabled
AutoLinks	Web (http://) and email addresses will automatically be converted to links.	Enabled
