# Test Page

# PluginTabs

*This code:*

> {TABS(name="user_tabset_01" tabs="Title 1|Title 2|Title3")}This is the content of the first tab ///// This is the content of the second tab ///// This is the content of the third tab {TABS}
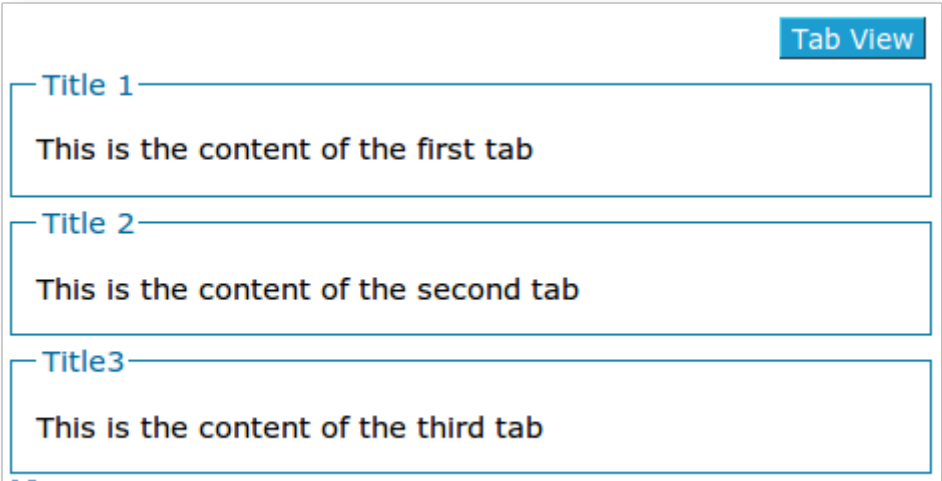

*Would produce:*

This is the content of the first tab

This is the content of the second tab

This is the content of the third tab

When clicking on a tab name, the content of each tab is loaded and shown without refreshing the browser window.

And when clicking on the "**No Tabs**" option, the display would change into:

## Related pages

* PluginPageTabs

## Aliases

Plugintabs | Plugintab | PluginTab | Plugin Tabs | Plugin tabs

**Bernard test for video**

**HTML for bootstrap 5.3**

It is not possible to add a class in the Wikiplugin (which is another consistency issue between wiki plugins) so it have to be added in the parent div.
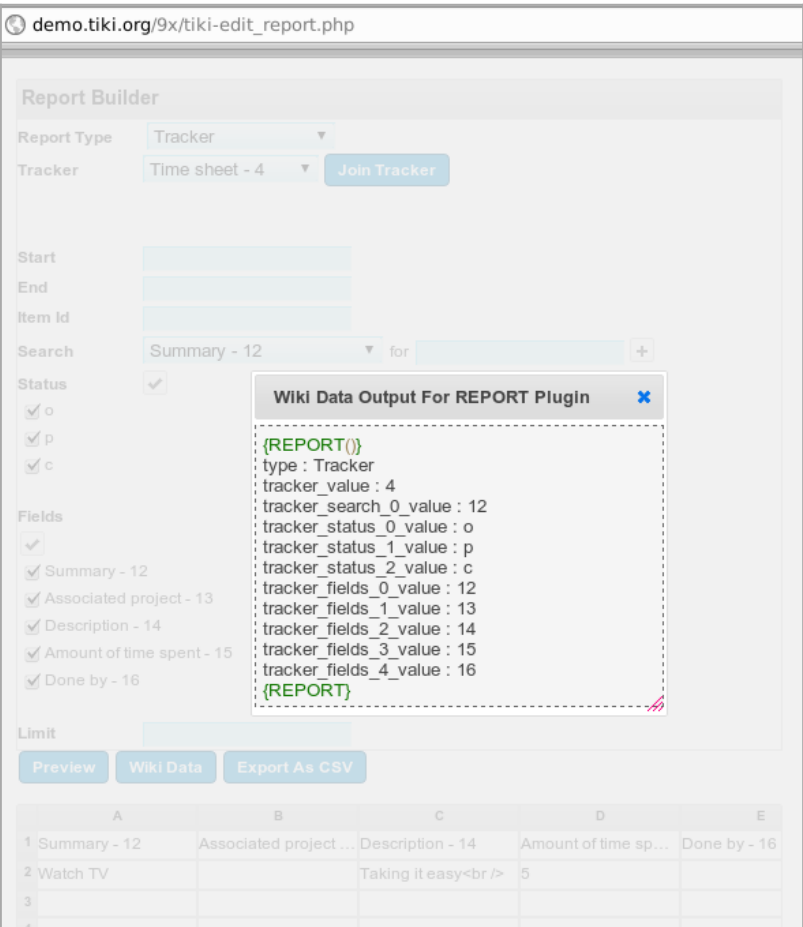

---

*Ignore this, just a page for testing.*

Test Wednesday 14 May, 2025 11:03:28 UTC

I don't ignore pages ☐

Just another testing line...

This will break this page:

# For Tiki 7

- 28 may - jb here testing saving ajax errors
- Maybe try without having done a preview...
- what else could it be? 3 saves and no error (in Firefox 4.0.1)
- trying the click on save directly thing... seemed fine
- maybe if you edit for ages?
    - I bet it only happens when you really don't want it to...
    - trying with pop-up preview...
    - Seems the auto save timer is broken □
- Wonder if that magnify icon to open/close the preview pane is the right icon?
    - Probably not...
- I also wonder if there are any docs about this *new* preview thing?

Have to go out now, will try more later.

# Previously on Tiki 6

- In Safari if you make a change and then click directly on the save button you sometimes get an alert about an undefined and irrelevant AJAX error.
    - Fixed (as far as i can tell)
