Integrator Details

Requirements

1. In php.ini `track_errors` should be `on` to be able to show integration error messages in a convenient way (`+$php_errormsg+` PHP variable used).

```plaintext
; Store the last error/warning message in $php_errormsg (boolean).
track_errors = On
```

2. `tiki_p_view_integrator` (see general permissions) needed to view configured repositories
3. `tiki_p_admin_integrator` (see general permissions) needed to configure repositories and rules
