Wysiwyg Editor Admin

Since Tiki2, Tiki includes a Wysiwyg (What You See Is What You Get) editor: through the integration of Fckeditor in the Wiki feature. Since Tiki6, this wysiwyg mode is powered by CKeditor, the new version family of the same engine.

It can be enabled at Admin -> General panel.

Please note that WYSIWYG doesn't work with Edit by Section.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>Wysiwyg Editor is optional:</td>
</tr>
<tr>
<td>... and is displayed by default:</td>
</tr>
<tr>
<td>Content is parsed like wiki page:</td>
</tr>
<tr>
<td>Content is partially parsed:</td>
</tr>
<tr>
<td>Toolbar skin:</td>
</tr>
<tr>
<td>Toolbar content:</td>
</tr>
</tbody>
</table>

[Image of Wysiwyg Editor Admin panel]
"Content is partially parsed" partial parsing includes:
* parsing of links
* parsing of images and generally what is included in { }
* parsing of wikiplugins

Toolbar skin: It selects the theme styles for icons, colors, etc. used by Wysiwyg editor

Toolbar content: Shows a list of features that will be loaded with the editor. For more information on these features, check the FCKEditor Documentation at http://www.fckeditor.net/
