

模块

在Tiki中，一个**module**是一个盒子的内容（可能或可能没有“chrome”如边框和标题背景）。所有侧栏信息通过模块呈现。The [Modules Admin](#)页面用于添加模块并管理Tiki站点中的模块区。

Here's a screenshot:

Some common uses for modules are to:

- Display [menus](#)
- Add special [features](#)
- Display custom information to users
- List most recent or most frequent actions or items

After adding modules, you can re-order them, assign [permissions](#) to them (so they appear only for specific user [groups](#)), or even allow them to be customized by specific users.

配置和显示模块

For site-wide module settings, click the **General** icon  on the [Admin Panels](#) or Access <http://example.org/tiki-admin.php?page=general>.

These settings will apply to all modules on the site and are explained in more detail at [Module Admin](#).

有两种方法可以配置和显示单个模块：

1. Using the Admin Modules Panel
 - Located at [Admin->Modules](#) or [tiki_admin_modules.php](#)
 - Allows you to:
 - Set module parameters
 - Create custom modules
 - Place modules in the left or right column and, since [Tiki7](#), other areas like the page header and footer
 - Documentation at [Module Admin](#)
2. Using [PluginModule](#)
 - Allows you to:
 - Display a module in a page or within other features (like blogs, articles, etc.) besides the left or right columns
 - Also place module content inside of a user module
 - Set module parameters
 - See [Index of Modules](#)

Modules vs. Plugins

The distinction between **modules** and **wiki plugin** is a little blurry. Technically speaking, modules are the *containers* and plugins are the *content*. However, the predefined modules included with the default Tiki installation contain plugins/content, but they are commonly called **modules**, too.
