## Overview

This tab supports administration of the 3D browser, a Tiki add-in which supports 3D modelling of Freetags (and also can be used for 3D browsing of Wiki page inter-links).

## To Access

From the [Tags](#) page, click the **3d Tag Browser Configuration** tab.

The screenshot shows the '3D Tag Browser Configuration' tab. At the top, there are tabs for 'General Settings', '3D Tag Browser Configuration', and 'No Tabs'. The main content area is divided into four sections:

- General:** Includes a checked checkbox for 'Enable freetags 3D browser', 'Browser width: 500', and 'Browser height: 500'.
- Graph appearance:** Includes 'Navigation depth: 1', 'Node size: 30', 'Text size: 40', 'Spring (connection) size: 100', 'Existing page node color: #00CC55', and 'Missing page node color: #FF5555'.
- Camera settings:** Includes an unchecked checkbox for 'Camera distance adjusted relative to nearest node', 'Camera distance: 200', 'Field of view: 250', and 'Feed animation interval (milliseconds): 500'.
- Physics engine:** Includes 'Friction constant: 0.4f', 'Elastic constant: 0.5f', 'Electrostatic constant: 1000f', 'Node mass: 5', and 'Node charge: 1'.

At the bottom of the configuration area is a 'Change preferences' button.

## Freetag 3D Browser Configuration

There is an admin screen, which currently only accepts configuration of the morcego browser for browsing the freetags.

To use the morcego 3D-Network-Browser, you'll have to activate the features:

- Morcego and
