Backlinks

Backlinks are a very important feature in a wiki. They answer the question "What pages link to this page?". The backlinks icon and dropdown list is displayed at the top right of wiki pages.

If a page is renamed, Tiki automatically updates all of its backlinks.

Use the \texttt{tiki_p_view_backlink} permission to allow or restrict who can view a page's backlinks.

**Activate Backlinks feature via Admin Wiki page.**

Backlinks are a wiki feature that can be enabled on the \texttt{Features} tab of the Admin Wiki page.

1. From the Admin Features page, click the \texttt{wiki} icon
2. From the Admin Wiki page, click the \texttt{Features} tab.
   (image missing)
3. Click \texttt{Change Preferences}.

To set the necessary \texttt{permission} for this feature, click the Key icon.

NOTE: If you are having trouble with backlinks showing up, try clearing the cache, rebuilding the site index and checking the group \texttt{permissions} for this feature.

**Activate Backlinks feature via Plugin**

It can also be done with \texttt{PluginBacklinks} so you can put anywhere.
