

ColorBox for JQuery

Since [Tiki 4.0](#) ColorBox is a new [jQuery](#) plugin which is replacing [ShadowBox](#) visual effects.

screenshot will come here

Usage Examples

this code:

```
{img src="http://farm3.static.flickr.com/2091/1532249675_5f917a49ac_s.jpg"
link="http://farm3.static.flickr.com/2091/1532249675_5f917a49ac_b.jpg" title="Some Image from flickr.com site... bla bla bla
bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla
bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla
bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla
bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla
bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla bla
rel="shadowbox"}
```

produces:

ColorBox "Gallery"

and this way you can have more images in wiki page displayed in the shadowbox as a gallery:

```
{img src="http://farm3.static.flickr.com/2091/1532249675_5f917a49ac_s.jpg"
link="http://farm3.static.flickr.com/2091/1532249675_5f917a49ac_b.jpg" title="Some Image from flickr.com"
rel="shadowbox[gallery]} {img src="http://farm2.static.flickr.com/1185/1467868764_898ec5daf3_s.jpg"
link="http://farm2.static.flickr.com/1185/1467868764_898ec5daf3_b.jpg" title="Old Port in Trogir by luci"
rel="shadowbox[gallery]} {img src="http://farm3.static.flickr.com/2212/1532365551_6856d00717_s.jpg"
link="http://farm3.static.flickr.com/2212/1532365551_a1ad132f1c_o.jpg" title="Sun Going Down by luci"
rel="shadowbox[gallery]}
```

results in:

Using html code with SEURL activated

Note: due to specific settings at doc it is not possible to call images directly using `displayfileId` or `tiki-download_file.php?fileId=fileId&display`. It should work fine on your Tiki.

```
<a href="display109" data-box="box[g]">Using html code</a>
```

~~Wanna YouTube video in the box ?~~

```
[http://www.youtube.com/v/KBewVCducWw&amp;autoplay=1|You Tube video in their flash
player|shadowbox;width=405;height=340;]
```

watch it here:

[You Tube video in their flash player](#)

A button opens content in a box

```
{BUTTON(href="HomePage",_rel="box",_text="Go there")}{BUTTON}
```

will create a button that opens the `HomePage()` in a color box:

[Go there](#)

Inline content in a *box trick

```
[#helloworld|Click Me !|shadowbox;width=280;height=180;title=Login Box] {BOX(id=helloworld,class=wiki-  
edithelp)} {TAG(tag=div,style=background-color: white !important;)} --- :: __Hello world !__ ::  
{MODULE(module=login_box)} {MODULE} :: Thank you for trying me !:: --- {TAG}{BOX}
```

looks like:

[Click Me !](#)

Content loaded using Ajax

Example 1

Code:

```
{JQ()}$jq("#ajaxload a").colorbox({ href: function(){ return $jq(this).attr('href')+' .wikitext'; } }  
);{JQ}{DIV(id="ajaxload")}[tiki-index_raw.php?page=HomePage|Content of a wiki page in ColorBox]{DIV}
```

Result:

[Content of a wiki page in ColorBox](#)

Example 2

Code:

```
[http://zukakakina.com/tiki-index_raw.php?page=HomePage|Content of a wiki page in ColorBox|box]
```

Result:

[Content of a wiki page in ColorBox](#)
