Drop Down Tracker Field

This tracker field allows you to create a drop down list of values.

Put the values you want listed in a comma delimited list. Note: Do not leave spaces between the comma delimited items.

- Ex: Yes, No, Maybe **correct**
- Ex: Yes, No, Maybe **incorrect**

Tiki > 1.9.7: If you repeat a value, this value will be used as the default value and will be pre-populated in your tracker form. In the example below, there are four different values for the dropdown with "1-2" as the default value.

<table>
<thead>
<tr>
<th>Name:</th>
<th>Matches per week</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type: Dropdown options: list of items separated with commas. Default value is specified by having the value indicated twice consecutively.</td>
<td>drop down</td>
</tr>
<tr>
<td>1-2,1-2,2-3,3-4,4 or more</td>
<td></td>
</tr>
<tr>
<td>Is column visible when listing tracker items?</td>
<td>☑</td>
</tr>
<tr>
<td>Column links to edit/view item?</td>
<td>☑</td>
</tr>
<tr>
<td>Column is searchable?</td>
<td>☑</td>
</tr>
<tr>
<td>Field is public? (for use thru trackerlist plugin)</td>
<td>☑</td>
</tr>
<tr>
<td>Field is hidden?</td>
<td>not hidden</td>
</tr>
<tr>
<td>Field is mandatory?</td>
<td>☑</td>
</tr>
<tr>
<td>Order</td>
<td>4</td>
</tr>
<tr>
<td>Save</td>
<td></td>
</tr>
</tbody>
</table>

If the field is optional, an empty value will be automatically added at the top of the values. The options are automatically translated. See [Interface translation (old)](Interface_translation) to know how to add a translation.

Note that each value must be unique. IE: it is not possible to do

0=false,1=true,1=almost true,0=almost false

Drop Down with other value
tiki>=1.9.7
The field works as the Drop Down field, except that it proposes a text field to enter an alternative value

Radio Tracker Field
tiki >= 2.0
The field works like a drop down field but displays a radio choice.
If you repeat a value, this value will be used as the default value and will be pre-populated in your tracker form.
If the first value of the option is the string '<br>', each option display will be on a different line - otherwise they will be on the same line (tiki>=2.1)

Sample with default selected value and label

```
y=yes, y=yes, n=no
```

Multilingual

Each option in all the fields are translated before being displayed. See Multilingual trackers.

Sample with default selected value and label in non-latin language

```
כן,כן, לא
```

Very long lists

For very long lists, you can use Items List and Item Link Tracker Fields

Alias

- Drop Down / Radio Tracker Field
