Drop Down Tracker Field

This tracker field allows you to create a drop down list of values.

Put the values you want listed in a comma delimited list. Note: Do not leave spaces between the comma delimited items.

- Ex: Yes, No, Maybe correct
- Ex: Yes, No, Maybe incorrect

Tiki > 1.9.7: If you repeat a value, this value will be used as the default value and will be pre-populated in your tracker form. In the example below, there are four different values for the dropdown with "1-2" as the default value.

If the field is optional, an empty value will be automatically added at the top of the values. The options are automatically translated. See Interface translation (old) to know how to add a translation.

Note that each value must be unique. IE: it is not possible to do

0=false, 1=true, 1=almost true, 0=almost false

Drop Down with other value

tiki>=1.9.7
The field works as the Drop Down field, except that it proposes a text field to enter an alternative value
Radio Tracker Field

`tiki >= 2.0`

The field works like a drop down field but displays a radio choice.
If you repeat a value, this value will be used as the default value and will be pre-populated in your tracker form.

If the first value of the option is the string '<br>', each option display will be on a different line - otherwise they will be on the same line (tiki>=2.1)

Sample with default selected value and label

```
y=yes,y=yes,n=no
```

**Multilingual**

Each option in all the fields are translated before being displayed. See Multilingual trackers.

Sample with default selected value and label in non-latin language

```
לא=לא,כן=י,כן
```

**Very long lists**

For very long lists, you can use Items List and Item Link Tracker Fields

**Alias**

- Drop Down / Radio Tracker Field
