Installing Tiki via Fantastico

Background on Siteground

Siteground.com is a typical Fantastico host and one of the Tiki friendly hosts so it is used as an example for this documentation. All other Fantastico hosts will be very similar. Shared hosting provides mainly an inexpensive, easy hosting service for low traffic wikis. Their customer service is very good, and their interface is user friendly, but their servers are heavily loaded and sometimes tiki performance is kinda slow. Overall a good bet for a starter wiki host.

- Includes CPanel and Fantastico - includes installation through fantastico and webanalysis and other tools through cpanel

Installation

After securing an account and choosing a domain name, installation is straightforward. Installation is either install by FTP, or with Fantastico with siteground you cannot use SSH.

Manage Your Account.

Cpanel is a utility that allows you to manage your site without knowing unix or programming. To find cpanel, login, and click as shown below.
Access CPanel

You'll see the following options. Click on cpanel and login.

Access Fantastico

When CPanel comes up, ignore most of it for now. Click on Fantastico at the bottom.
Install Tiki

Fantastico is a installer. You'll use it to install Tiki. Once fantastico comes up, click on Tiki Wiki CMS Groupware.
Then, select new installation. Notice for example that Tiki has been installed on karateforge.com. This same tool is used for future upgrades and remembers past installations.

**TikiWiki**

**Short description:** TikiWiki is designed to be an international, clean and extensible Content Management System and Groupware that can be used to create all sorts of web applications, sites, portals, intranets and extranets. TikiWiki also works great as a web-based collaboration tool. TikiWiki has a lot of native options and sections that you can enable/disable as you need them.

**Homepage:** http://www.tikiwiki.org/

**TikiWiki support forum**
(We are not associated with the support forum)

**New Installation (1.9.7)**
Disk space required: 42.96 MB
Disk space available: 249770.5 MB

**Current installations:**
- karateforge.com (1.9.7)
  - Visit site
  - Remove
  - Upgrade to 1.9.7

Choose your domain to install. Then click install. Notice that the administrator login is set as admin with password admin.
If all goes well, you'll see something similar to the following, and can click "finish".

**TikiWiki**

**Install TikiWiki (1/3)**

**Installation location**

- **Install on domain**: how2why4.com
- **Install in directory**: Leave empty to install in the root directory of the domain (access example: http://domain/).

**Admin access data**

- **Administrator username**: admin
- **Password**: admin

You can change the admin login/password later in the administration area of your TikiWiki installation.

**Install TikiWiki**

If all goes well, you'll see something similar to the following, and can click "finish".

**TikiWiki**

**Install TikiWiki (2/3)**

- You chose to install in the main directory of the domain how2why4.com.
- The access URL will be: http://how2why4.com/.

Click on **Finish installation** to continue.

**Finish installation**

Change Admin Password

Immediately after fantastico installation, change the admin password before someone else does. Go to your site and login:

**Login**

- **User**: [enter admin username]
- **Password**: [enter admin password]

Use the admin login and admin password. The system will force you to change the password as follows.
Installation Complete

Tiki is installed and you're set up as the administrator.

Alias

- Siteground Installation
