

Featured Links

The featured links section manages links. You can enter as many links as you want and a user module displays the links in the order that you want. Clicking the links will open the site in a frame inside the central section of Tiki. Statistics are kept about the number of times that featured links are visited and you can automatically order featured links by the number of hits they have.

The featured links admin panel screen lets you enter links that will be displayed in the featured links module.

You can access the screen to admin the featured links by following the 'links' link from the admin menu. Or copy and paste this on the tail end of your site's URL:

tiki-admin_links.php

The screenshot shows the Tiki Admin interface for the 'Featured Links' module. On the left is a dark sidebar with a search bar and a menu including 'Admin Dashboard', 'Configure', 'Global Setup', 'Main Features', 'Miscellaneous', 'Users & Community', 'Advanced', and 'Manage'. The main content area has a dark top bar with a user profile icon. Below this is a green success message: 'Success: Featured link saved'. A blue tip message follows: 'Tip: To use these links, you must assign the featured_links module.' A blue button 'Generate positions by hits' is visible. Below is a table titled 'List of featured links' with columns: URL, Title, Hits, Position, and Type. One link is listed: 'https://copydoc.tiki.org/Video-Tutorials' with title 'Tiki Video Tutorials', 0 hits, position 1, and type 'n'. Below the table is the 'Add Featured Link' form with fields for URL, Title, Position (with a note '(0 disables the link)'), and Link type (set to 'framed'). A 'Save' button is at the bottom. The footer reads 'Powered by Tiki Wiki CMS Groupware | Theme: Default'.

URL	Title	Hits	Position	Type
https://copydoc.tiki.org/Video-Tutorials	Tiki Video Tutorials	0	1	n

In this screen you can enter links, remove or edit existing links and set the position for each link in the featured links modules. Links with position = 0 won't be displayed, so you can use that number to temporarily disable a link without removing it from the listing.

You can select the opening type for each link that can be:

- Replace current window (a normal link)
- New window (a normal link opened in a new window)
- Framed (The page will be opened as an iframe inside the Tiki window)

You will also have an option to automatically generate the positions for featured links using the number of hits (visits) which each link has.

Then, go to Admin->Modules. Select "Featured links" module in Assign new module operation. You can position the list of featured links on the left section or right section. On click of these links, the external pages will be opened .
