Google Gadgets

"Google Gadgets are dynamic web content that can be embedded on a web page." Source: http://en.wikipedia.org/wiki/Google_Gadgets

So Google Gadgets provides you with some HTML & JavaScript code that you are to embed in your site. Please note that the application itself is hosted by Google and you are trusting them to run an application accessible on your site.

To use in Tiki is very simple, just use PluginHTML.

For example,

Code provided by Google Gadgets in the PluginHTML

```
{HTML()} <script
src="//www.gmodules.com/ig/ifr?url=http://www.google.com/ig/modules/builtin_weather.xml&amp;synd=open&amp;w=320&amp;h=200&amp;title=__MSG_weather_title__&amp;lang=all&amp;country=ALL&amp;border=%23ffffff%7C3px%2C1px+solid+%23999999&amp;output=js"></script> {HTML}
```

Will produce:

Note that for security reasons, a user with sufficient rights must approve this code as explained in Plugin Security.
