Integrator Details

Requirements

1. In php.ini, `track_errors` should be `On` to be able to show integration error messages in a convenient way. (-+$php_errormsg+- PHP variable used).

   ```
   ;Store the last error/warning message in $php_errormsg (boolean).
   track_errors = On
   ```

2. `tiki_p_view_integrator` (see general permissions) needed to view configured repositories

3. `tiki_p_admin_integrator` (see general permissions) needed to configure repositories and rules
