Integrator Details

Requirements

1. In php.ini `track_errors` should be **On** to be able to show integration error messages in a convenient way (-+$php_errormsg+- PHP variable used).

   ;Store the last error/warning message in $php_errormsg (boolean).
   track_errors = On

2. [tiki_p view integrator](#) (see general permissions) needed to view configured repositories

3. [tiki_p admin integrator](#) (see general permissions) needed to configure repositories and rules
