Integrator Details

Requirements

1. In php.ini, track_errors should be on to be able to show integration error messages in a convenient way

```
; Store the last error/warning message in $php_errormsg (boolean).
track_errors = On
```

2. tiki_p_view_integrator (see general permissions) needed to view configured repositories

3. tiki_p_admin_integrator (see general permissions) needed to configure repositories and rules
