Integrator Details

Requirements

1. In php.ini **track_errors** should be **On** to be able to show integration error messages in a convenient way (-+$php_errormsg+- PHP variable used).

   ```php
   ;Store the last error/warning message in $php_errormsg (boolean).
   track_errors = On
   ```

2. **tiki_p_view_integrator** (see general permissions) needed to view configured repositories

3. **tiki_p_admin_integrator** (see general permissions) needed to configure repositories and rules
