**JQuery S5**

This is a very simple jQuery + Javascript Slide Show engine. It can turn the most basic document into a slideshow, and it has been improved since Tiki6.1.

The concept is based on S5 which is a wonderful HTML slideshow engine. S5, however, requires you to add more markup than I care to worry about.

**Notes**

There is now a movement to create our own jQuery s5 plugin, named "jQuery.s5". Trunk has been switched out to use it.

**Tip**

If you need smaller text in a slideshow, you can use something like PluginTag with a "small" tag.

**Example**

http://dev.tiki.org/wish2135
