Module

In Tiki, a **module** is simply a box of content (which may or may not have "chrome" such as borders and title backgrounds). All side-column information of this site is presented through modules. The **Modules Admin** page is used to add modules to and manage modules in the module zones of a Tiki site.

Here's a screenshot:

![Default Tiki page with the Menu module in the left column.](image)

Some common uses for modules are to:
- Display **menus**
- Add special **features**
- Display custom information to users
- List most recent or most frequent actions or items

After adding modules, you can re-order them, assign permissions to them (so they appear only for specific user groups), or even allow them to be customized by specific users.

Configuring and Displaying Modules

For site-wide module settings, click the **General** icon on the Admin Panel or Access [http://example.org/tiki-admin.php?page=general](http://example.org/tiki-admin.php?page=general). These settings will apply to all modules on the site and are explained in more detail at Module Admin.

There are two ways to configure and display individual modules:

1. **Using the Admin Modules Panel**
   - Located at Admin->**Modules** or [tiki_admin_modules.php](http://example.org/tiki-admin.php)
   - Allows you to:
     - Set module parameters
     - Create custom modules
     - Place modules in the left or right column and, since Tiki7, other areas like the page header and footer
     - Documentation at Module Admin

2. **Using PluginModule**
   - Allows you to:
     - Display a module in a page or within other features (like blogs, articles, etc.) besides the left or right columns
     - Also place module content inside of a user module
     - Set module parameters
   - See Index of Modules
Modules vs. Plugins

The distinction between modules and plugins is a little blurry. Technically speaking, modules are the containers and plugins are the content. However, the predefined modules included with the default Tiki installation contain plugins/content, but they are commonly called modules, too.
