Module Whats related

The whats_related module uses the Categories system to show you a list of items in the same category as the item you are viewing. Articles, Blogs, and wiki pages can all be shown in this module.

Parameters

Lists objects which share a category with the viewed object.

Go to the source code
Preferences required: feature_categories

Parameters
no parameters

Questions:

- Are there parameters that control which types of documents are shown, e.g. only wiki pages?

- Why do article hits show the header text instead of the article title?
