

Plugin Aliases tab

Related Topics

Overview

Use this tab to create a new [wiki plugin](#), by using a modified copy of an existing [plugin](#).

- [Wiki Plugin](#)
- [Plugin Alias](#)

To Access

From the [Text Area](#) Admin page, click the **Plugin Aliases** tab.

Note

if applicable

The screenshot shows the 'Text area' admin interface with the 'Plugin Aliases' tab selected. The interface is divided into several sections:

- About plugin aliases**: A help section explaining that Tiki plugin aliases allow you to define your own custom configurations of existing plugins. It includes a link to 'Find out more here'.
- General Information**: Fields for entering the plugin's name, base plugin (set to 'addtocart'), name, description, body label, dependencies, filter, validation, and inline edit UI.
- Simple Plugin Arguments**: Fields for adding new arguments and setting defaults.
- Plugin Parameter Documentation**: A section for documenting parameters.
- Plugin Body**: Fields for ignoring user input and entering default content.
- Default Content**: A rich text editor for defining default content.
- Parameters**: A section for managing parameters.
- Composed Plugin Arguments**: A section for managing composed arguments.

A 'Change preferences' button is located at the bottom right of the main form area.
