Starting in Tiki 3, the usage of potentially dangerous plugins needs to be validated in a case by case basis. An admin can do that through `tiki-plugins.php`.

Then, if you go to one of those pages listed in the previous list, you'll find a box with the option to see the details to that plugin usage. Users with the required permissions will be able to preview and validate or reject them.

**Example from 8.x**

This example shows the "Approve all pending plugins" button. Note the Refresh button that should be used after a Tiki upgrade; that process can take a very long time to reparse all of the pages of your Tiki site; you may have to perform that Refresh more than one time to fully reparse your site.
