

# Plugin A Link

This [wiki plugin](#), available since Tiki1, creates a link to an anchor in a wiki page. Use in conjunction with [PluginAname](#), which creates the anchor, or link to a wiki heading.

## Parameters

Create a link to an anchor

Introduced in Tiki 1. Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: `wikiplugin_alink`

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Anchor link label.		
<b>aname</b>		The anchor name as defined in the Aname plugin.		1
pagename	pagename	The name of the wiki page containing the anchor. If empty, the anchor name will be searched for on the wiki page where the plugin is used.		1

## Example

### Aname Plugin Usage

```
{ANAME( )}
```

anchorname <--put the name of the anchor here. Use this same name for the aname= parameter in the Plugin Alink (see just below).

```
{ANAME}
```

ANAME example: `{ANAME( )}anchorname{ANAME}`

### Alink Plugin Usage

```
{ALINK(
```

aname=anchorname <-- put here the name of the anchor you created using the Plugin Aname!

```
)}
```

link text <-- put here the text to appear as the link.

```
{ALINK}
```

ALINK example: `{ALINK(aname=anchorname)}link text{ALINK}`

## Demonstration

To jump down to the anchor at the bottom of the page click [HERE](#). <-- Here is where I put the ALINK plugin in this page.

.  
. .  
. .  
. .  
. .  
. .  
. .

Here is a second [link](#) to the same anchor at the bottom of the page. Again, I used the ALINK plugin.

**The anchor is here.** <-- I put the ANAME plugin at the beginning of this line. Now you can click [HERE](#) to jump to the anchor I put at the top of the page (you can't see where that one is unless you look into the page editor [])
