

# Plugin Code

This [wiki plugin](#) is used to display any source code (including wiki syntax) on a page without it being processed. The code is displayed in a gray box in a fixed-width monospaced font. A title can be added to the box and line numbers added. Syntax highlighting is also available, since Tiki7 using [CodeMirror](#) and using GeSHi before that.

## Parameters

Display code with syntax highlighting and line numbering.

*Introduced in Tiki 1.*

[Go to the source code](#)

*Preferences required:* `wikiplugin_code`

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Code to be displayed		
caption	text	Code snippet label.		1
colors	text	Any supported language listed at <a href="http://codemirror.net/mode/">http://codemirror.net/mode/</a> . Pref <code>feature_syntax_highlighter</code> must be true for this to have any effect		17
wrap	(blank) 1 0	Wrap lines of code which do not fit in the display box's width. Enabling avoids overflow or hidden line ends.	1	
theme	default  3024-day  3024-night  abbot  abcdef  ambiance-mobile  ambiance  ayu-dark  ayu-mirage  base16-dark  base16-light  bespin  blackboard  cobalt  colorforth  darcula  dracula  duotone-dark  duotone-light  eclipse  elegant  erlang-dark  gruvbox-dark  hopscotch  icecoder  idea  isotope  juejin  lesser-dark  liquibyte  lucario  material-darker  material-ocean  material-palenight  material  mbo  mdn-like  midnight  monokai  moxer  neat  neo  night  nord  oceanic-next  panda-syntax  paraiso-dark  paraiso-light  pastel-on-dark  railscasts  rubyblue  seti  shadowfox  solarized  ssms  the-matrix  tomorrow-night-bright  tomorrow-night-eighties  ttcn  twilight  vibrant-ink  xq-dark  xq-light  yeti  yonce  zenburn	Any supported theme listed at <a href="https://codemirror.net/demo/theme.html">https://codemirror.net/demo/theme.html</a>		17
ln	(blank) 1 0	Show line numbers for each line of code.		1

rtl	(blank) 1 0	Switch the text display from left to right, to right to left (left to right by default)		1
mediawiki	(blank) 1 0	Encloses the code in an HTML code tag, for example: <code>&amp;lt;code&amp;gt;user input&amp;lt;code&amp;gt;</code>	0	8.3

## Syntax highlighting

To activate syntax highlighting and enjoy most of the options (lines number, colors, etc), the Code editor (CodeMirror) feature must be enabled at Control Panels > Editing and Plugins > General Settings (tab) > Features (pane).

See the list of [CodeMirror](#) supported languages that can be used for the colors parameter.

## Example

### PHP with line numbers

*This code:*

```
{CODE(colors="php")} <?php $menu = $menubar->getHomeMenu(); if($menu->link != "") { print "\t<td width=\"7%\" valign=\"top\">\n"; $menu->printMenu(); print "\t</td>\n"; } {CODE}
```

*Would produce:*

```
<?php $menu = $menubar->getHomeMenu(); if($menu->link != "") { print "\t<td width=\"7%\" valign=\"top\">\n"; $menu->printMenu(); print "\t</td>\n"; }
```

## Tiki syntax highlighting

Tiki syntax is supported too.

*This code:*

```
{CODE(colors="tiki")} {img attId="57|58|59" desc="desc" alt="Sample Images" thumb="y" stylebox="float: left; margin-right:10px"} {CODE}
```

*Would produce:*

```
{img attId="57|58|59" desc="desc" alt="Sample Images" thumb="y" stylebox="float: left; margin-right:10px"}
```
