

Plugin Group

Use this [wiki plugin](#) to display content based on the user's [groups](#) or friends. It is similar to [PluginPerm](#).

Parameters

Display content based on the user's groups or friends

Introduced in Tiki 1.

[Go to the source code](#)

Preferences required: wikiplugin_group

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Wiki text to display if conditions are met. The body may contain {ELSE}. Text after the marker will be displayed to users not matching the conditions.		
groups	groupname <i>separator:</i>	Select one or more groups allowed to view the block.		1
notpending	groupname <i>separator:</i>	Select one or more groups. Users will be allowed to view the block if their membership in all of the selected groups is not pending.		13.0
pending	groupname <i>separator:</i>	Select one or more groups. Users will be allowed to view the block if their membership payment to join the groups is outstanding.		13.0
friends	username <i>separator:</i>	Select one or more users. Friends of these selected users will be allowed to view the block.		4.0
users	username <i>separator:</i>	Select one or more users allowed to view the block.		27
notgroups	groupname <i>separator:</i>	Select one or more groups not allowed to view the block.		1

Notes on usage

- The {ELSE} part is optional.
- The groups and notgroups parameters may be used at the same time.
- Groups can be included in other groups, and this can impact how this plugin behaves. For example, if you want a section to be seen by the group A and the group Admins (`groups="Admins|A"`), and not by group B (`notgroups="B"`), be careful not to include group B in the Admins group . If Admins includes A and B, Admins will not see the section.

Examples

Basic syntax

```
{GROUP(groups="Registered|Admins" notgroups="Editors")}show this content for users included/excluded from groups specified in the parameters{ELSE}otherwise show this content{GROUP}
```

Security

Use of this plugin to hide sensitive information will not prevent it from being revealed to users with permissions to view or edit the page source. Users that have a Watch on the wiki page will receive an email with the entire wiki page source, thus revealing the information regardless whether the content would be hidden because of this plugin.
