Plugin Markdown

Introduced in Tiki20

Use this wiki plugin to parse a page content using Markdown syntax. CommonMark flavor of Markdown was used for the implementation. See https://commonmark.thephpleague.com/

Parameters

Introduced in Tiki 20.
Preferences required: wikiplugin_markdown

Parameters

(body of plugin) - Markdown syntax to be parsed

no parameters

Examples

Example 1

This code:

```markdown
{MARKDOWN()}
# This is an <h1> tag
## This is an <h2> tag
###### This is an <h6> tag

*This text will be italic* (hard line break after this because of two spaces -->)
_This will also be italic_

**This text will be bold** (there's alternative syntax for line break after this parenthesis)
__This will also be bold__

>You **can** combine them

{MARKDOWN}
```

Would produce on this site:

This is an <h1> tag
This is an <h2> tag
This is an <h6> tag

This text will be italic (hard line break after this because of two spaces -->)
This will also be italic
This text will be bold (there's alternative syntax for line break after this parenthesis)
This will also be bold

You can combine them
